

# PROPERTY OPERATIONS

Hilton

## OPERATION: OPPORTUNITY

**OUR MISSION IS YOUR SUCCESS**

Engineering and Facility Maintenance Service members have proven technical and mechanical skills that maintain our military ships, aircraft, vehicles and military installations around the world. Just as the in the military, our hotels have many of the same conventional systems they are trained and experienced with. From HVAC and refrigeration to chillers and boilers, electrical and plumbing to carpentry and masonry, these talented professionals possess the functional skills and technical expertise needed to succeed in facilities maintenance within our properties.

### ENGINEERING IN THE MILITARY:

Engineers in the military often have valuable credentialing and relevant work experience including:

- In-resident, comprehensive training, where apprentice technicians receive months of hands-on training and classroom study.
- Months of on-the-job training as journeymen where they begin to hone their skills.
- Specialized training and deliberate career progression to become craftsmen.
- Real-world construction projects, earning industry certifications (e.g., EPA universal, DOL Journeyman Cert, stationary engineer) leading to additional training in safety, quality, and project management all the while practicing their craft in places around the world.

Veterans who master their craft often continue their careers in industry and further their professional development at leading trade schools and technical colleges. This unique combination of military training, real-world operational experience, and formal education makes this talented labor pool ideally suited for Hilton engineering departments

### COMMON MILITARY OCCUPATIONAL SPECIALTIES (MOS) PROPERTY OPERATIONS:

#### US Navy
